

Dual-Polarized Antennas From MARS Antennas & RF Systems

MARS Antennas & RF Systems has been a world leader in the design and manufacturing of broadband outdoor and in-building panel antennas for over 20 years. MARS' vast experience in optimization of performance and size constraints, as well as its wide selection of antenna offerings, makes it a perfect partner to its customers. MARS is one of the first antenna companies to offer multiple polarized MIMO sector and CPE antennas in all relevant broadband frequencies, from 698 MHz up to 6.5 GHz (700 MHz, 900 MHz, 1.8 GHz, 2.3-2.7 GHz, 3.5GHz and 4.4-6.5 GHz) with gains as high as 30dBi – a remarkable achievement in panel antennas. MARS owns an in-house, internal, anechoic chamber, which enables high-quality product development and exceptional quality control. The following antennas are just a few options available.
